

ABSTRACT

The invention relates to processes for the production of a compound of the following formula (I)

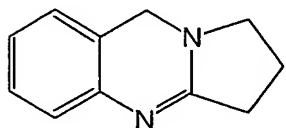

(I)

(II)

by converting a compound of formula (II) with 2-pyrrolidone, said 2-pyrrolidone being used in excess, relative to compound (II); as well as to processes for the production of a compound of the following formula (III) comprising the following steps:

(III)

- (A) preparing compound (I);
- (B) reduction reaction, which yields compound (III) in salt form;
- (C) liberating compound (III) from the salt.
